

Open for Agents

FICTIONAL SAMPLE - NOT A CUSTOMER REPORT

Agent Readiness Assessment

A clear comparison of what the owner intended, what WordPress publishes, and what approved public checks observed.

EXECUTIVE ANSWER

1 confirmed difference needs attention.

The report separates confirmed differences from checks that could not be completed. Start with the actions below; unavailable examiner or network evidence is not presented as a website fault.

ALIGNMENT

Needs attention

EVIDENCE COVERAGE

Complete

- ✓ Read a public page matched the confirmed intent across every applicable evidence source obtained.
- ✓ Search the site matched the confirmed intent across every applicable evidence source obtained.
- ✓ Search products matched the confirmed intent across every applicable evidence source obtained.

AT A GLANCE

What the assessment established

CAPABILITIES REVIEWED

4

4 had complete applicable evidence.

READ-ONLY CHECKS PASSED

2

Catalogue or registration evidence is not counted as execution.

CRITICAL JOURNEYS VERIFIED

1 of 1

A journey is verified only when all required capability evidence is complete and aligned.

ACTIVE ACTIONS

1

Stable action identities support the follow-up review.

PRIORITY

What to do next

The report consolidates related symptoms into a small number of root-cause actions. Start with the first item.

1

FIX FIRST · WORDPRESS / OPEN FOR AGENTS

Republish “Inspect a product” on Live MCP server

Applies to: Inspect a product

WHY IT MATTERS

The named capability is consistently expected by the owner and Core but has different MCP server membership in the public observation.

EVIDENCE

3 bound evidence references support this finding across WordPress evidence, assessment evidence, public discovery evidence. Exact references are retained in the technical appendix.

SMALLEST CORRECTION

Republish only the affected MCP server capability records from the current reviewed Core catalogue.

HOW TO VERIFY IT

Require fresh MCP server evidence to match both confirmed intent and fresh Core membership for every affected capability identifier.

ROLLBACK

Restore the prior MCP server records if republishing changes unrelated capabilities.

CAN IT BE IGNORED?

No. The public MCP server projection remains different from the two agreeing authoritative inputs.

SIX EVIDENCE LAYERS

How the conclusion was reached

Alignment and evidence coverage are reported separately. An unavailable check is never converted into a failure or a pass.

- 1

Confirmed owner intent
What the authorized site owner said should be public and usable by agents.

ALIGNMENT

Matches

COVERAGE

Complete
- 2

WordPress evidence
What the installed Open for Agents plugin reports from its reviewed configuration and checks.

ALIGNMENT

Matches

COVERAGE

Complete
- 3

Public discovery
What was visible from the public website at the time of the assessment.

ALIGNMENT

Matches

COVERAGE

Complete
- 4

Contract consistency
Whether the public catalogues and capability details agreed with the supplied WordPress evidence.

ALIGNMENT

Matches

COVERAGE

Complete
- 5

Live MCP interoperability
Whether the approved read-only MCP check completed through a compatible protocol client.

ALIGNMENT

Needs attention

COVERAGE

Complete
- 6

Browser WebMCP interoperability
Whether the approved read-only browser check completed through the native WebMCP surface.

ALIGNMENT

Matches

COVERAGE

Complete

IMPORTANT USER OUTCOMES

Critical journeys

Find accurate public information
Search the site

CAPABILITY DETAIL

What agents can discover and what was tested

Each capability explains the practical consequence before its technical ID, and keeps publication evidence separate from an approved read-only execution check.

SUPPORTING		Matches	Complete
Read a public page			
Practical consequence: People relying on an agent use this capability to read a public page; a mismatch may make that task unavailable or inconsistent.			
TECHNICAL ID get_public_page			
The applicable catalogue and registration evidence agreed. No execution pass is implied where a probe was not applicable.			
EXPECTED SURFACES	OBSERVED PUBLICATION	EXECUTION EVIDENCE	
ActionMap · MCP catalogue · Live MCP server · Browser WebMCP	ActionMap MCP catalogue Live MCP server Browser WebMCP	Present Present Present Present	Not applicable Not applicable

CRITICAL		Matches	Complete
Search the site			
Practical consequence: People relying on an agent use this capability to search the site; a mismatch may make that task unavailable or inconsistent.			
TECHNICAL ID search_site			
2 approved read-only execution checks passed; applicable catalogue and registration evidence also agreed.			
EXPECTED SURFACES	OBSERVED PUBLICATION	EXECUTION EVIDENCE	
ActionMap · MCP catalogue · Live MCP server · Browser WebMCP	ActionMap MCP catalogue Live MCP server Browser WebMCP	Present Present Present Present	Passed Passed

SUPPORTING		Needs attention	Complete
Inspect a product			
Practical consequence: People relying on an agent use this capability to inspect a product; a mismatch may make that task unavailable or inconsistent.			
TECHNICAL ID woo_get_product			
At least one complete comparison differs from the confirmed setup.			
EXPECTED SURFACES	OBSERVED PUBLICATION	EXECUTION EVIDENCE	
ActionMap · MCP catalogue · Live MCP server · Browser WebMCP	ActionMap MCP catalogue Live MCP server Browser WebMCP	Present Present Not published Present	Not applicable Not applicable

SUPPORTING		Matches	Complete
Search products			
Practical consequence: People relying on an agent use this capability to search products; a mismatch may make that task unavailable or inconsistent.			
TECHNICAL ID woo_search_products			
The applicable catalogue and registration evidence agreed. No execution pass is implied where a probe was not applicable.			
EXPECTED SURFACES	OBSERVED PUBLICATION	EXECUTION EVIDENCE	
ActionMap · MCP catalogue · Live MCP server · Browser WebMCP	ActionMap MCP catalogue Live MCP server Browser WebMCP	Present Present Present Present	Not applicable Not applicable

CONTINUITY

Action history

Stable action records prevent a later report from silently erasing earlier work.

Action state by evidence version

ACTION	STATE	CAPABILITIES	FIRST EVIDENCE	CURRENT EVIDENCE
Republish "Inspect a product" on Live MCP server	Not resolved	Inspect a product	1	1

CONTINUITY

What to preserve and when to recheck

This result is a point-in-time assessment. Preserve the reviewed setup and repeat the assessment when the conditions below change.

What to preserve

- Keep the reviewed publication setting and capability catalogue in place while they continue to match the owner's confirmed setup.
- Keep approved checks read-only and limited to public data.
- Store the canonical technical JSON with this report; it carries the exact evidence identities needed for audit and follow-up.

When to recheck

- After changing the Open for Agents plugin, published capabilities, MCP or browser discovery, hosting, CDN, redirects, or access rules.
- Before relying on a newly added capability, or after a previously available check becomes unavailable.
- When the owner's intended public setup or safety boundaries change.

BOUNDARIES

Scope and limitations

Included

- Authorized owner intent and the supplied Open for Agents Core evidence export.
- Fresh public discovery and exact contract comparisons for the named site.
- Approved anonymous read-only MCP and browser WebMCP checks where applicable.
- Stable actions, evidence versions, and a bounded follow-up comparison.

Not included

- Private, authenticated, session-dependent, state-changing, order, payment, and cross-origin execution.
- Model quality, named-agent compatibility, security, SEO, accessibility, legal, or regulatory certification.
- Automatic remediation, continuous monitoring, scoring, ranking, or a readiness badge.

Important limitations

- This is a point-in-time technical assessment, not a score, certification, security or SEO assessment, model evaluation or prediction.
- Catalogue or registration evidence does not establish execution; an untested probe or critical journey is never presented as a pass.
- No state-changing, private, authenticated, session-dependent, cross-origin or model path was executed.

ASSESSMENT DETAILS

Customer-readable evidence record

The canonical technical JSON remains authoritative for exact evidence identities and machine-readable comparisons.
